The history

The Ski Charger barefoot edition is a new outboard ski boat designed, tested and build by Evert Aartsen and Charger ski boats(a company owned and founded by Evert).

20 Years of international competition experience, over 10 years of coaching and 6 years of boat building gave Evert The know how to design The boat skiers where waiting for, for a long time.

The result is a revolutionary outboard ski boat,

the SKI CHARGER barefoot edition.

The Ski Charger

Because of a smart hull design and construction, the Ski Charger is the first ever outboard boat to reach barefoot competition requirements easily, with just 140 HP . The adjustable driver seat and the co-pilot bench are made with high quality marine upholstery and designed for comfort. The big swim platforms make it super easy to get on board after skiing without having to come close to the engine. The Hull design and the, standard fitted Sea Star hydraulic steering system make the boot very easy to drive, even with a heavy skier on the barefoot boom.

The Ski Charger barefoot edition is a no nonsense boat with everything the skier, driver and co-pilot would want.

The equipment

The Ski Charger barefoot edition is standard delivered with the following equipment:

Sea Star hydraulic steering, comfortable adjustable driver seat, comfortable co-pilot bench, aluminium ski pylon, aluminium build in fuel tank, automatic bilge pump, stainless steel rope guard, two competition speedometers, navigation lights, stainless steel hand grips ad the swim platforms, storage compartments under front and back deck and in both sides, etc.
